Laptop). Is there any possibility to develop for the desktop version of it? I mean if you have experience with WxPython, Python, PyQt, MySQL, etc. It would be a great help to me if you reply. Please note that I can't move this question from the forum to the Programming section, because of the rule : A: There is a website for application development: There's also a Python Developer's Guide for wxPython: If you're trying to use wxPython, it's really about creating GUI's in Python. The GUI elements are already designed with wxPython, so it's just a matter of writing your code, and there's plenty of documentation on how to use wxPython and the associated APIs. Authors' contributions ===== All authors contributed to the design of the study and the acquisition of data. TA drafted the manuscript. All authors have read and approved the final manuscript.
